

INVISIBLE PATTERNS TECHNICAL TIPS

HOODS

All Invisible Patterns Hood templates have been designed to not only offer protection to the most vulnerable areas, but also to be aesthetically pleasing and complimentary to the vehicle contours.

For this reason all Hood templates have been designed to wrap at both the leading edge and sides with any excess trimmed out of sight on the underside of the hood.

Wherever there may be a corner, a diagonal cut should be made to ensure adhesion and ease excess folding.

It is recommended that the fender ends are fitted prior to the hood so that you have a guide to line up on either side of the hood to ensure fitment is accurate and level.

Ocassionally to further enhance the finish of our product, hood emblems may need to be removed, please refer to Manufacturers guidelines for any technical assistance and proceed with caution as described.
