

INVISIBLE PATTERNS TECHNICAL TIPS

HOODS WITH GRILLES

All Invisible Patterns Hoods which have Grille surrounds need to be fitted in a precise format to ensure ease of fitment.

As with all hoods you will start from the centre and work outwards towards the fenders, however it is important that you deal with the grille surround and any bulges in the hood as you work along, as these will cause problems if left until last.

Therefore once the main centre section is installed, work around the grille insert and finally match ends to fender ends, to ensure a professional finish.

Caution should be taken when dealing with bulges in the hood and you may need to tension in several directions before finally squeegeeing into place, this will avoid creases in the film.
